

If you're fully vaccinated, here's how to add your digital vaccination certificate to the Service Victoria app:

1. Make sure you've updated to the latest version of the Service Victoria app. Find the app in App Store or Google Play store and tap update.

- If you are already up to date, the 'Update' button probably won't be shown.
- If you haven't downloaded it yet, Install it.

2. Open up the Service Victoria app and tap on the option to "Add certificate via myGov". This will take you to login to myGov.

3. Scroll to 'proof of COVID-19 vaccination' and tap 'Go to Medicare'

4. In myGov tap "view history" and then "Share with check in app"

5. You should see the Service Victoria app with a button saying "Share" next to it - tap on that.

6. Read the conditions, then tap "Accept and share"

7. Back in the Service Victoria app tap "Add certificate" - then you're good to go.

You can also add your certificate using the Express Plus Medicare app if you've got it installed - and if you don't have Medicare, you can add your certificate using your Individual Healthcare Identifier in myGov.

If you have difficulty with the Express Plus Medicare app or your myGov account you can contact the Commonwealth Government's hotline on 13 23 07.

There's more info, and instructions to use the Express Medicare app on the Service Victoria website:
